Environmental Construction Group

*By treating our customer as #1,
we rise to the top of our industry.
Robert Gibbs, President*

Environmental Construction Group, Inc. (ECG) was established in 2005 by partners Robert Gibbs and Bruce Corey. Bob and Bruce each have a wide range of experience in both the environmental and construction businesses. With more than 25 years in the industry, Bob's main focus has been environmental management. Bruce has spent the majority of his career in the construction industry, managing and coordinating all aspects of both private and public jobs. This combination of skills that Bob and Bruce bring to a project is unparalleled. Their ability to think outside the box, bring solutions and their attention to detail proves to be a valuable asset to their customers.

In 2019, Bob took over full ownership of ECG and our mission still remains the same, to bring high quality remediation services along with integrity to an industry that has been lacking in these areas. At the same time, clients can rest assured that we place the utmost importance on protecting the environment.
